

ENVIRONMENT POLICY

The environmental policy of “CSK Steel” LTD is oriented to decrease of the adverse environmental impact resulting from manufacturing of metal structures, saving resources, their useful use and observing of the laws and regulations and meeting other requirements related to environmental protection thereby ensuring environmental protection.

That means that we:

- Reduce the environmental impact of our production units by decreasing the use of natural resources and establishing close technological processes.
- Reduce the amount of production waste and by-products.
- As far as it is technically possible replace the dangerous substances used in our products with more environmentally friendly ones.
- Consider the potential environmental impact of any new economic activities in advance in order to avoid the situations dangerous for the environment and potential accidents.
- Store and distribute our products in a safe way. Ensure decrees of the environmental impact of our transport.
- When selecting suppliers and cooperation partners we take into account their ability to meet the environmental requirements set in the company which correspond to the guidelines of this policy.
- Provide free and open access to the information about our implemented environmental measures to our staff, controlling institutions and other parties concerned.
- Control and measure the environmental impact of our activity, as well as skillfully utilize waste.
- Observe all the legislative and normative acts binding upon our activity, as well as other requirements on which the company has undertaken its obligations.

In order to ensure continuous development of the company and improvements of the environmental performance we set the objectives and targets of the environmental management system and develop a program for their achieving on an annual basis.

The management of the company considers meeting the requirements of the policy as one of the main duties and ensure safe work environment, and it will not allow adverse environmental impact on the company resulting from the activity performed by the company.

The staff and cooperation partners of the company understand the environmental policy and it is continuously explained to them.
